### **CHIEF SCIENTIST OF INNOVATIVE TECHNOLOGIES GIVES PRESENTATION TO MS SUPPORT GROUP**

(Bristol, VA) – Dr. Keith R. Latham, Chief Scientist of Innovative Technologies, is sharing his passion for medical research with the community.

On Monday, he gave a presentation to a support group for Multiple Sclerosis patients in Bristol, Virginia. The presentation included information on Dr. Latham's research in the area of auto-immune diseases and a general discussion of current therapies.

"This is all about bridging the gap between research and the patients," said Dr. Latham. "It's part of our job as researchers to let them know that we are making progress and that there's hope for the future."

Since 1996, Dr. Latham and his team have developed more than 35 pharmaceutical products, addressing a variety of treatment areas, including breast cancer, Parkinson's disease, and Alzheimer's disease. This year, thanks to local investment, Innovative Technologies has been able to begin the process of taking its products through clinical trials.
